This agreement ("Agreement") is made between Professional Computer Consulting, Inc. d/b/a GreatData.com ("GreatData"), a Florida Corporation and the company purchasing the GreatData products ("the Company").

WHEREAS, the Company wishes to license certain products from GreatData,

The Company and GreatData agree:

Use Grant/Updates: Subject to the provisions of the Agreement, GreatData hereby grants the Company a non-exclusive license to use the GreatData product(s) ordered by the Company. The company shall periodically receive GreatData updates as they become available throughout the term of the Agreement at no additional charge. Such updates or notice thereof shall be forwarded to the Company via email or other means.

Term: The term of this Agreement for GreatData products commences on the date the products are ordered by the Company and shall continue in effect for a period of one year. This Agreement may be renewed for additional one-year periods at the then current price by mutual agreement of the parties.

Sites: The Company may use the GreatData products at multiple sites if multiple copies of the product are purchased. A site is defined as including, but not limited to, the following locations where all or part of the GreatData products are stored or accessed:

- **For non-web site locations:** an individual site would include each of the following:
 - Each office building or branch office.
 - Each individual user who is off-site accessing the data or product from laptops or other computers. These users would typically include sales reps, vendors, installers, technicians, etc.
- **For web site locations:** an individual site would include each web server (internet or intranet), including all servers accessing our data and co-located web servers. If multiple companies or domain names are sharing our products on the same server, then each company and/or domain name is considered a separate site. A site for a Search Engine company would be for each office building where the web servers are located or co-located.
- **Development locations:** if a site is to be used strictly for development or maintenance on software which uses the GreatData products, the Company does not need to include it as an additional site.
- **Exemption for a single company with both web and non-web site use:** if the product will be used for one company at one non-web site location and for that company's one Internet web site (one domain name), then only one copy of the product needs to be purchased.
- **For the total number of sites:** include all sites for your company and, if reselling or redistributing our product as part of another software package, each additional site where it is to be installed.

Multiple Licenses: Normally, each product is licensed by the number of **sites** that can access the product (as defined above). The purchase of the **first copy** of the product entitles the purchaser to a **single site** license, then they must purchase **one additional copy** for each **10** additional sites. If the purchaser has previously purchased multiple licenses of the product under a different number of sites per product, they may still purchase multiple licenses under that arrangement.

Unlimited Use Licenses: Currently, for our **U.S. Zip Code, Mexican Postal Code and Zip Search Deluxe products**, you may purchase an Unlimited Use License by purchasing a total of **10 copies** of the product. **Note: the Unlimited Use License does not apply to the Canadian Postal Codes product line.**

Reselling: In order to resell our products, the Company agrees that they will not be selling a competing product. We also ask that, if possible, the Company makes the GreatData information difficult to extract into a useable format (usually this means that the data will be put in a binary or encrypted format.) The Company will be responsible for upgrading their customers as needed. The Company will need to purchase the appropriate number of copies for the number of sites where the GreatData product is installed.
